## PROJECTS

### JobFinder

Website made in ASP.NET MVC

1. Companies can post vacancies.
2. Job seekers can apply to those posts.
3. Job seekers can upload their CV and update their profile.
4. Companies can see the profile of those who applied to their posts.
5. Companies can write recommendations about job seekers and job seekers can write reviews about companies.
6. Companies can search people based on their skills.

### Covid Protection Store

E-Commerce Website made in PHP

1. The customers can view products and order them.
2. The admin can add new products from the admin panel.
3. Registered customers can view extra products from their account.
4. The customers can send mails to the admin.
5. The admin can view the orders and mails from the customers.

### NoWasteNoHunger

Android App made in Java

1. Users can post about their leftovers.
2. Other users can see these posts and collect the leftovers from the given address in the post.
3. The users who post about their leftovers will be sent an SMS when others are willing to collect the leftovers.
4. The users can lodge a complaint to the admin by sending a mail.
